Security incident report

Section 1: Identify the network protocol involved in the incident
HTTP. Running tcpdump shows issues at the application layer

Section 2: Document the incident
Discovered via tcpdump, the website yummyrecipesforme.com has been brute forced and traffic to the site has been redirected to a new location called greatrecipesforme.com

Section 3: Recommend one remediation for brute force attacks
One suggestion to prevent brute force attacks in the future would be to ensure the use of complex passwords. Another way to shore that up would be using MFA.
